

Membrane Solutions for Treating Industrial Wastewater Lagoons

An innovative technology with the potential to dramatically improve industrial & municipal lagoon performance and create re-use quality water.

THE PRESSURES

- Stressed lagoon infrastructure is a common issue in many high strength wastewater industries
- Regulatory compliance is difficult to attain with current lagoon designs
- Water treatment and re-use is a solution to these problems.

THE SOLUTION

Swirltex has designed **modular systems** that can treat lagoon wastewater using membrane technology, facilitating **water re-use**

- Consistently removes solids and oil (<5ppm)
- Low maintenance system, low operational costs
- **Modular system** for ease of installation, on-site treatment solution
- Increased lagoon capacity without large upgrades

Modular design to treat 4.5 - 365gpm (25 - 2,000 m3/day) of wastewater effluent.

Hyper-oxygenation of lagoon included in recycle stream.

Consistent quality for water recycling and re-use for numerous purposes including irrigation.
